# MONDOTURF

## FIBERS

A new generation of fibers with reduced fibrillation pattern or no fibrillation, in association with a new polymer, provides durability, performance and playing characteristics similar to natural grass.

### New pattern of fibrillated and non-fibrillated fibers

Mondo's new generation of fibers improves the aesthetic of the grass field while greatly increasing the durability of the fiber. The fiber looks and feels like natural grass without compromising the turf bind.

A better molecular alignment and a straight line molecular direction provide dimensional memory and a greater capacity of recovery. The new molecular structure contributes to the durability and the performance of the fiber; the fiber feels soft and has a greater elastic memory that ensures the fiber will retain its appearance and will not deform even after many years of use.

Completely integrated design and production of all components: yarn, backing, FTS underlayment and infill materials.

### MF

- Truly extruded monofilament
- High quality components and UV stabilization package
- Most realistic grass-looking product on the market
- High thickness blade supplies superior dimensional memory
- Elliptical cross section prevents fibrillation
- Greatest tuft bind on the market
- Ball roll similar to natural grass

### TB

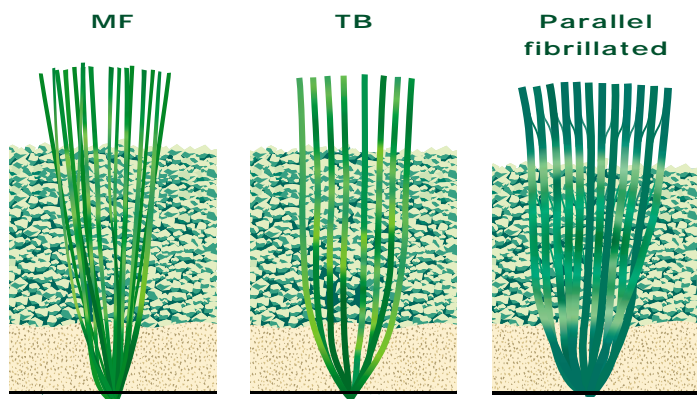

- 3<sup>rd</sup> generation non-fibrillated fiber
- High quality components and UV stabilization package
- High durability - up to 20,000 Lisport Cycles
- Slightly curly fiber prevents granule migration
- Ideal for high-traffic / low maintenance applications

### PF

- 2<sup>nd</sup> generation fibrillated fiber with reduced fibrillation pattern
- High quality components and UV stabilization package
- Cost competitive, outstanding value
- Proven fiber installed in countless fields worldwide in all climates

### BACKING

- 3-layer
- Heavy polyurethane coating
- High dimensional stability
- Provides best tuft bind in the industry

### LISPORT TEST

Lisport test results confirm Mondo's new generation fibers are more durable than conventional fibers.

**Mondo's new generation fibers guarantee less flattening, less pile fibrillation, less breakage and less tuft loss.**
